

Instruction manual for hair ball trimmer

In order to avoid injury caused by misuse, carefully read the operation manual before using this product, And use the product in strict accordance with the purpose indicated in the instruction manual.

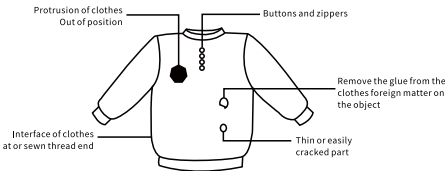

Working principle

The electric motor is driven by the battery to rotate the wind blade, and the rapid rotation of the wind blade drives the rapid rotation of the knife head. The function of the mesh cover is to separate the clothes from the knife head and prevent damage caused by contact with clothes. There are many small holes on the net cover, which form an air duct by using the suction of the rotating wind blade. When contacting clothes, let the wool ball and wool scraps extend into the net cover and be directly cut off by the knife head. The cut off wool ball fell from the side of the knife head into the wind blade below. Under the condition of rapid rotation, the five vertical plates on the wind blade guide the wool ball and wool chips into the chip storage box.

- Warning**
1. After using this product, please store it in a cool and dry place, not in a place with direct sunlight or heat source;
 2. People without behavioral ability and lack of relevant experience and knowledge (including children) must use, clean and maintain this product under the supervision and guidance of their guardian;
